## **Central University of Punjab**

## **Ph.D. in Computational Physics**

### **Batch 2022**

## **Department of Computational Sciences**

## **School of Basic Sciences**

#### **Programme Outcome**

The above-mentioned program will enrich students with the fundamental knowledge of theoretical/computational sciences in the field of basic as well as applied research. On successful completion of the Ph.D. program the students will able to:

1. Design independent research problems in the field of Theoretical / Computational Sciences

2. Examine real-life problems with the help of computational tools

3. Execute research in this new spectrum of multidisciplinary area of science at the national and international platform.

4. Construct themselves as Industrious research personnel

**Course Title: Research and Publication Ethics** 

#### Course Code: CCS.702 Course Type: CC Total Hours: 30

#### **Course Learning Outcomes:**

On completion of this course, students will be able to:

CLO1: Describe with the ethics of research.

CLO2: Outline the good practices to be followed in research and publication.

CLO3: Describe various aspects of Publication ethics

CLO4: Appreciate the importance of Open access publication

CLO5: Identify the misconduct, fraud and plagiarism in research.

CLO6: Utilize various online resources and software to analyse their research output.

Units/ Hours	Contents	Mapping with CLO	
I 5 Hours			
II 5 Hours	Scientific Conduct1. Ethics with respect to science and research2. Intellectual honesty and research integrity3. Scientific misconducts: Falsification, Fabrication,and Plagisrism (FFP)II4. Redundant publications: duplicate and		
IIIIII II 5 Hours	Learning Activities: Peer discussion, real world application and brain storming.1. Publication ethics: definition, introduction and importance2. Best practices/standards setting initiatives and guidelines: COPE, WAME, etc.3. Conflicts of interest4. #### Course Title: Review Writing and Presentation Course Code: CCS.703 Course Type: CC Total Hours: 60

L	Т	Ρ	Cr
0	0	4	2

**Course Objectives and Learning Outcomes:** The objective of this course would be to ensure that the student learns the aspects of the Review writing and seminar presentation. Herein the student shall have to write 5000 words review of existing scientific literature with simultaneous identification of knowledge gaps that can be addressed through future work.

The evaluation criteria for "Review Writing and Presentation" shall be as follows:

Maximum Marks: 100

S.No.	Criteria	Marks
1	Review of literature	25
2	Identification of gaps in knowledge	15
3	References	10
4	Content of presentation	15
5	Presentation Skills	20
6	Handling of queries	15
	Total	100

Transactional Modes: Lecture; Tutorial; Problem solving; Self-learning.

Course Title: Curriculum, Pedagogy and Evaluation Course Code: UNI.753 Course Type: CC Total Hours: 15

L	Т	Ρ	Cr
1	0	0	1

#### Course Learning Outcomes:

On completion of this course, students will be able to:

CLO1: analyze the principles and bases of curriculum design and development

CLO2: examine the processes involved in curriculum development

 $CLO3\colon$  develop the skills of adopting innovative pedagogies and conducting students' assessment

CLO4: develop curriculum of a specific course/programme

Units/ Hours	Contents	Mapping with CLO
I 4 Hours	<ul> <li>Bases and Principles of Curriculum:</li> <li>Curriculum: Concept and Principles of curriculum development,</li> <li>Foundations of Curriculum Development. Types of Curriculum</li> <li>Designs- Subject centered, learner centered, experience centered</li> <li>and core curriculum. Designing local, national, regional and</li> <li>global specific curriculum. Choice Based Credit System and its</li> <li>implementation</li> <li>Learning Activities: Peer discussion, real world</li> <li>application, brain storming.</li> </ul>	CLO1
II 4 Hours	Curriculum Development:           Process of Curriculum Development: Formulation of graduate attributes, course/learning outcomes, content selection, organization of content and learning experiences, transaction process.           II	
III 3 HoursCurriculum and Pedagogy: Conceptual understanding of Pedagogy. Pedagogies: Peeragogy, Cybergogy and Heutagogy with special emphasis on Blended learning, Flipped learning, Dialogue, cooperative and collaborative learning Three e- techniques: Moodle, Edmodo, Google classroomLearning Activities: application, brain storming		CLO3
IV	Learners' Assessment: Assessment Preparation: Concept, purpose, and principles of	CLO4

4 Hours	preparing objective and subjective questions. Conducting Assessment: Modes of conducting assessment – offline and online; use of ICT in conducting assessments.
	Evaluation: Formative and Summative assessments, Outcome based assessment, and scoring criteria.
	<b>Learning Activities</b> : Peer discussion, real world application, brain storming

#### **Transaction Mode**

Lecture, dialogue, peer group discussion, workshop

#### **Evaluation criteria**

There shall be an end term evaluation of the course for 50 marks for duration of 2 hours. The course coordinator shall conduct the evaluation.

#### **Suggested Readings**

#### Course Title: TEACHING ASSISTANTSHIP Course Code: CCS.752 Course Type: CC Total Hours: 30

L	Т	Р	Credit
0	0	2	1

#### **Learning Outcome:**

At the end of this skill development course, the scholars shall be able to

(1) familiarize themselves with the pedagogical practices of effective class room delivery and knowledge evaluation system

(2) manage large and small classes using appropriate pedagogical techniques for different types of content

#### **Activities and Evaluation:**

- The scholars shall attend Master degree classes of his/her supervisor to observe the various transaction modes that the supervisor follows in the class room delivery or transaction process one period per week.
- The scholars shall be assigned one period per week under the direct supervision of his/her supervisor to teach the Master degree students adopting appropriate teaching strategy(s).
- The scholars shall be involved in examination and evaluation system of the Master degree students such as preparation of questions, conduct of examination and preparation of results under the direction of the supervisor.
- At the end of the semester, the supervisor shall conduct an examination of teaching skills learned by the scholar as per the following **evaluation criteria**:
  - The scholars shall be given a topic relevant to the Master degree course of the current semester as his/her specialization to prepare lessons and deliver in the class room before the master degree students for one hour (45 minutes teaching + 15 minutes interaction).
  - The scholars shall be evaluated for a total of 50 marks comprising *content knowledge* (10 marks), *explanation and demonstration skills* (10 marks), *communication skills* (10 marks), *teaching techniques employed* (10 marks), and classroom interactions (10).

#### Course Title: Electronic Structure Theory Paper Code: CCS.704 Total Lectures: 45

L	Т	Ρ	Cr
З	0	0	3

#### Course Learning Outcomes (CLO):

On completion of this course, students will be able to:

CLO1: identify and define basic terms and concepts, which are needed for this specialized corse.

CLO2: describe the HF SCF method.

CLO3: select the basis sets.

CLO4: compare post-HF methods.

CLO5: devlop how to apply quantum chemistry to study chemical and biochemical problems.

Units/Ho urs	Contents	Mapping with CLO
I 10 Hours	<ul> <li>Fundamental Background: Postulates of quantum mechanics, Eigen values and Eigen functions, operators, hermitian and unitary operators, some important theorems. Schrodinger equation-particle in a box (1D, 3D) and its application, potential energy barrier and tunneling effect, one-dimensional harmonic oscillator and rigid rotor.</li> <li>Learning Activities: Brain storming and problem solving.</li> </ul>	CLO1 CLO2
II 10 Hours	Many Electron atoms: Angular momentum, eigenvalues of angular momentum operator, Particle in a Ring, Hydrogen Atom. Electron correlation, addition of angular momentum, Clebesch-Gordan series, total angular momentum and spin-orbit interaction. <b>Learning Activities</b> : Brain storming and problem solving.	CLO1 CLO2
III 15 hours	Ab Initio Methods:Review of molecularstructure calculations, Hartree-Fock SCFmethod for molecules, Roothaan-Hartree-Fockmethod, selection of basis sets.Electron Correlation and Basis Sets:Configuration Interaction, Multi-ConfigurationSelf-ConsistentField,Multi-Reference	CLO3

	Configuration Interaction, Many-Body Perturbation Theory, Coupled Cluster, Basis sets <b>Learning Activities</b> : Brain storming and problem solving, modelling and scaffolding.	
IV 10 Hours	<b>DFT and Force Field methods:</b> Energy as a functional of charge density, Kohn-Sham equations. Molecular mechanics methods, minimization methods, QSAR.	CLO4 CLO5
	<b>Learning Activities</b> : Brain storming and problem solving, modelling and scaffolding.	

Transactional Modes: Lecture; Tutorial; Problem solving; Self-learning.

# Course Title:ComputationalSolidStatePhysicsLTPCrLaboratory0063Paper Code:CCS.711Total Hours:90

**Learning Outcomes:** At the end of the computational laboratory, the students will be able to:

- learn the computational methods for CSCl crystal structure determination
- carry out the geometry optimization of molecular crystals
- measure the Infrared spectra of crystals, and Raman spectra
- interpret the dispersion relation and cut-off frequency for the mono-atomic lattice

which will enhance their employability in their further potential careers in academia and industry

1. Determine the crystal structure of CsCl using Gaussian package.

2. Geometry optimization of crystals using Gaussian package.

3. Determination of Infrared spectra of crystals using Gaussian package.

4. X-ray diffraction refinement using ICSD data.

5. Obtaining the structure of NaCl crystal system using Diamond software package.

6. Determination of Raman spectra using Gaussian package.

7. To determine magneto resistance of a bismuth crystal as a function of magnetic field.

8. Determination of critical temperature of high temperature

superconductor and Meissner effect for a high Tc superconductor.

9. Determination of ferromagnetic to paramagnetic phase

transition temperature (TC = Curie temperature).

10. Determination of dielectric constant of solids.

11. Study of the dispersion relation and cut-off frequency for the monoatomic lattice. Study of the dispersion relation for the di-atomic lattice – 'acoustical mode' and 'optical mode' and energy gap.

12. Study of thermal expansion pf solids.

13. Study of thermal conductivity of solids.

Transactional Modes: Computation work, Experimentation and Viva-voce..

#### Course Learning Outcomes (CLO):

On completion of this course, students will be able to:

CLO1: the large scale systems of linear, non-linear and simultaneous equations

CLO2: the matrix and determinants, interpolations, polynomial and spline interpolation

CLO3: the numerical differentiation and integration

CLO4: complex curve fitting methods, explicit schemes to solve differential equations

CLO5: apply numerical methods to obtain approximate solutions of complex mathematical problems.

Units/Ho urs	Contents	Mapping with CLO
Ι	Linear and Non –Linear equations:	CLO1
10 Hours	Solution of Algebra and transcendental equations, Bisection, Falsi position and Newton-Rhapson methods-Basic principles- Formulae-algorithms. <b>Simultaneous equations:</b> Solutions of simultaneous linear equations- Guass elimination and Gauss Seidel iterative methods-Basic principles- Formulae- Algorithms, Pivotal Condensation. <b>Learning Activities</b> : Brain storming and problem solving.	CLO2
II	Matrix and Determinants:	CLO1
10 Hours	Matrix Inversion, Eigen-values, Eigen-vector, Diagonalization of Real Symmetric Matrix by Jacobi's Method.	CLO2
	Learning Activities: Brain storming and problem solving.	
III 15 hours	<b>Interpolations:</b> Concept of linear interpolation-Finite differences-Newton's and Lagrange's interpolation formulae-principles and Algorithms	CLO3

	<b>Numerical differentiation and integration:</b> Numerical differentiation-algorithm for evaluation of first order derivatives using formulae based on Taylor's series, Numerical integration-Trapezoidal Rule, Simpson's 1/3 Rule, Weddle's Rule, Gauss Quadrature Formulae-Algorithms. Error in numerical Integration. <b>Curve Fit:</b> least square, straight line and polynomial fits.	
	<b>Learning Activities</b> : Brain storming and problem solving, modelling and scaffolding.	
IV	Numerical Solution of Differential	CLO4
10 Hours	<b>Equations:</b> Picards Method, Taylor's Series Method, Euler's Method, Modified Euler's Method, Runge-Kutta Method, Predictor- Corrector Method.	CLO5
	<b>Learning Activities</b> : Brain storming and problem solving, modelling and scaffolding.

**Learning Outcomes:** At the end of the course, the students will be able to:

- learn computer code for the large scale systems of transcendental and polynomial equations
- understand numerical strategies to write a computer code for the solution of matrix and determinants, interpolations, polynomial and spline interpolation
- learn the computer code for numerical differentiation and integration, differential equations, complex curve fitting, and simple optimisation

After completion of this course will help the students to apply numerical methods to obtain approximate solutions of complex mathematical problems.

#### **Course Content**

To write and execute computer programs in Fortran/Python language for the following problems:

1. Solution of transcendental or polynomial equations by the Newton Raphson method.

- 2. Matrix summation, subtraction and multiplication.
- 3. Matrix inversion using Gauss-Jordan's Matrix-Inversion Method.

4. Solution of Simultaneous Linear Equations: Gaussian Elimination, Gauss Seidel Iteration Method.

- 5. Finding Eigen values and Eigenvectors.
- 6. Newton/Lagrange interpolation based on given input data.
- 7. Numerical first order differentiation of a given function.

8. Numerical integration using Trapezoidal, Simpson's 1/3, Gaussian Quadrature methods.

9. Solution of first order differential equations using the Rung-Kutta method,

10. Monte Carlo integration.

**Transactional Modes:** Laboratory based practicals; Problem solving; Self-learning.

#### Course Title: Atomic and Molecular Spectroscopy Paper Code: CCS.717 Total Lectures: 45

L	Т	Ρ	Cr
3	0	0	3

#### Course Learning Outcomes (CLO):

On completion of this course, students will be able to:

CLO1: Learn the various types of Atomic spectra and corresponding their features,

CLO2: Learn the various types of Molecular spectra and corresponding their features

CLO3: Gain the knowledge about various molecular spectroscopic techniques,

CLO4: Apply the theories of molecular spectroscopy,

Units/Hours	Contents	Mapping with CLO
I 12 Hours	<ul> <li>Atomic Spectra: Revision of quantum numbers, electron configuration, Hund's rule etc. origin of spectral lines, LS &amp; JJ coupling, selection rules, Spectrum of hydrogen, helium and alkali atoms, X-ray spectra, fine spectra, hyperfine structure, Width of spectrum lines.</li> <li>Learning Activities: Brain storming and problem solving.</li> </ul>	CLO1
II 11 Hours	MolecularSpectra:Molecularpotential,Separationofelectronicandnuclearwavefunctions,Born-Oppenheimerapproximation,Electronic,Vibrationalandrotationalspectrumofdiatomicmolecules,Selectionrules,Frank-CondonprincipleLearningActivities:Brainstormingandproblemsolving.	CLO2
IIIIII 11 Hours	AdvancedSpectroscopy:MicrowaveandInfraredspectroscopyofdi-andpolyatomicmolecules,normalcoordinatesandtheirsymmetry (CO2),FT-IR instrumentationLearningActivities:Brainstormingandproblemsolving.	CLO3

	Spectroscopy of Special Materials: Raman
	Effect, rotational and rotation- vibrational Raman
	transitions, nuclear spin effects, polarization of
IV	Raman lines, Vibrational spectroscopy of
11 Hours	diatomic molecules, Franck-Condon factor, <sup>CLO4</sup> rotational fine structure.
	<b>Learning Activities</b> : Brain storming and problem solving, modelling and scaffolding.

Transactional Modes: Lecture; Tutorial; Problem solving; Self-learning.
